

Don't Spill the Beans

I can tell you how many beats the note gets.

Step 1: Set the Bean bowl up

Make sure you match the white dot to the white dot on the hand. Do the same with the purple dot.

Step 2: Decide the order of who will go

Step 3: Take two Cards

Take two cards and add the beats of each note up.

$$\text{Quarter Note} + \text{Quarter Note} = 3$$

$$\text{Triplet Quarter Note} + \text{Triplet Quarter Note} = 2$$

$$\text{Half Note} + \text{Quarter Note} = 5$$

Step 4: Place the Beans on the Pot

Once you add up the beats, place that many beans on top of the Pot. Be careful not to spill the beans.

See the chart on the next page to help you figure out how many beats each note gets.
